

File 20101024.1723: The difference between signals and cues in evolutionary biology: a signal changes the behaviour of the receiver in a way that benefits the signaller. A cue benefits only the receiver. Cues may be inadvertently sent. An 'honest' signal is one that reliably predicts something useful to the receiver. Source: wikipedia: [http://en.wikipedia.org/wiki/Signalling\\_theory](http://en.wikipedia.org/wiki/Signalling_theory).
