Weekly activity report no. 20120412.1541 (GMT-7) sequence no. 0236, week -1 TT

Relating to the content of chapters five through seven described last week, coding of items in the evidence is proceeding with reference to identifying all occurrences of all crucial events, flows, or state changes that must occur or run to completion if the certification testing process is to succeed; at the same time I am flagging candidate certain other events, that if not prevented or detected quickly after they begin, doom the CT&E activity to becoming mired. I hope to have a relatively stable set of codes next week, after which it should stop changing. I am using the same codes to point into a file of direct quotations and citations collected all along. My supervisors recommended this week to file one more GSO.15 form, which I did, and to focus without distraction on getting the data analysis done before allowing any more writing or rescheduling; I am following their advice. As soon as I have got the analysis completed, I will agree upon a detailed plan with Dr Flchais and Dr Martin showing milestones they will hold me to.

I have started planning for when I need to go back to work in a few more months.

Joe Loughry

Doctoral Student in the Department of Computer Science

St Cross College, Oxford

End of WAR 0236.
