Weekly activity report no. 20111104.0118 (GMT-6) sequence no. 0213, week 4 MT

I finished writing the final technical report for the Air Force Research Laboratory contract. I wrote several referee reports for the OXFORD-CS-2011 conference, and updated the conference web site. The programme committee will meet this week to evaluate submissions. I responded to the comments from the evaluators on my application to the IPRB patent review board and the attorney search results for prior art in preparation for the board meeting next week.

I met Tuesday afternoon with Dr Martin. I reported much activity but no progress at all on thesis work. Air Force contract requirements for quarterly and annual summary reports were delivered, leaving only the final technical report. I worked a few hours on a possible new funding source, BAA 10 09 RIKa 'Cross Domain Innovative Technologies', but I do not know if I should even pursue that work. The amount of time demanded by Lockheed is increasing without bound. I have meetings booked tomorrow with an HR manager at Lockheed and with my L-code to figure out what to do next. Wednesday, I met with a trusted financial advisor to look at my accounts and determine what I can afford to do.

Dr Martin and I talked about the ISPP seminar on mobile phone theft; he sent me the speaker's slides. OXFORD-CS-2011 programme committee work is almost wrapped up; the local committee members will run the show and the conference dinner. There was no meeting of the security reading group this week; I have a couple of papers I would like to suggest but no time to prepare, so I haven't put one forth. I reported that I have no more than week-to-week funding presently. I promised to meet with Dr Flchais and set a schedule after submitting the final technical report.

Our next meeting is scheduled for Tuesday, 8th November 2011 after reading group.

Table of progress report on analyses and interpretations (unchanged from last week due to working full-time on the final technical report):

Chapters 1 and 2 need the specific work indicated. Writing a review article on declassification.

Chapter 3 on CS1 current status: 60% done (needs model linking coding to grounded theory). Estimated completion date: December.

Chapter 4 on CS2 current status: 5% done, waiting until CS1 is properly completed. Estimated time to complete: December and January.

Chapter 5 on CS3 current status: 0% done, waiting until CS2 is done. Estimated time to complete: February.

Chapter 6 and 7: current status: 5% done, waiting until end of January to work on.

I will go back to work on the declassification review section in the morning.

Joe Loughry

Doctoral Student in the Department of Computer Science
St Cross College, Oxford

End of WAR 0213.
