

File 20111110.0900: Notes from 0800 meeting with Stephen Dill re: BAA something-or-other RIKA:

Steve, Kevin somebody (not Miller), Jeff Dutoit, myself, Bill, Martin Hoffman from ATL, Tom Cantone, and Kevin Newman were on the call. Bill had contacted Carl Weir reL help on a white paper in response to an ATO. Question: why did CDIS put out an amendment to the CDA? From ATL's perspective, AFRL have a reputation for modifying their BAAs, tuning them. Preventing malicious actors from misusing the system is new in the admentment.

Jeff Dutoit: AFRL are NOT looking for a new guard; they want to be *guard agnostic*. They are looking for another layer of assurance. AFRL invented ISSE guard, then passed it to Dalton Enterprises for development. They don't have experience with TMAN, but they do understand RM already. Rome will probably be interested in learning more about TMAN. Right now the big discriminator between TMAN and RM is that RM is SABI certified and TMAN is not.

SADL could be useful for the next version of CLOAK. One of the participants in today's meeting is going to send me information on SADL.

Jeff: we will be sending in our own response to the BAA for specific improvements to CLOAK.
