

File 20100728.1619: I found a reference to the book by [1] in an article by [2]. I ordered a copy of the book—out of print—from a used book seller on Amazon.com. Interesting features of the defence industry, as applies to certification and accreditation of cross domain systems: it is a monopsony, meaning there is (effectively) only one buyer. Other features are going to have to wait until I read the source material; I don't want to just repeat [2]'s analysis or his words.

WAR to Dr Martin due tomorrow. I do not have a new draft paper ready yet. I don't know what I am going to say in the report yet. I will have results from tomorrow's RM 5.0 hotwash, but no Security Reading Group or supervisor meeting this week.
