Weekly activity report no. 20110915.1716 (GMT-7) sequence no. 0206, week 8+12 TT

I met with Dr Ashbourn to go over results from the viva and to go over plans for Michaelmas term. I obtained a useful reference on qualitative methods [UK Physical Sciences Centre, 2011] before I left. This week I am reading three dissertations for their methods of using grounded theory; afterwards I will schedule a meeting with Dr Flchais to discuss. I would like to plan another trip to Oxford near the end of the year, either December or January, to present results in progress.

The Unified Cross Domain Management Office (UCDMO) released version 4.0 of the UCDMO cross domain inventory this week. I met with the developer of R's systems engineering manager regarding the trade study of OS options for version 6.0 of R'' and details of the Navy transition funding. The programme manager and government programme office are looking only at immediate cost and appear to be ignoring the risks inherent in support; I will work the new information into my model.

Security reading group was postponed this week but I found an article to suggest for an upcoming session [Alexander and Smith, 2011].

TO DO: finish the LaTeX template and abstract submission process for the OXFORD-CS-2011 conference; reading on methodology; set up meetings with both supervisors to plan deliverables for this term.

Joe Loughry

Doctoral student in the Computing Laboratory

St Cross College, Oxford

End of WAR 0206.
