Weekly activity report no. 20120329.1951 (GMT-7) sequence no. 0234, week 8+3 HT

I met with Dr Flchais by Skype video early this morning to talk about my specific plan for finishing in a few weeks. It followed a long email exchange in the past few days where I asked for advice from my supervisors about how to proceed. Dr Martin and Dr Flchais both responded quickly and helped. In the meeting this morning, Dr Flchais asked questions about the HAZOP application idea that I spent time on recently instead of the intended analysis activity using grounded theory. I explained why I thought the HAZOP angle was useful, but also said I thought I had insufficient time to develop it properly, and probably should drop it. Dr Flchais and Dr Martin have been talking, and asked to see my dissertation in its current form right now, without cleaning it up first. Having anticipated the request, I had it ready and emailed the file to Dr Flchais after the Skype call along with the meeting minutes. Dr Flchais asked for estimates to finish coding of the the CS-1 and CS-2 case studies; I estimated 2.5 weeks and 4 weeks respectively, although I have higher confidence in the first estimate. Status: back to coding for the CS-1 (and CS-2) analysis in ATLAS.ti and writing my dissertation.
