

File 20090402.2307: I went looking tonight for evidence of disk manufacturers (Seagate, Maxtor, IBM/Fujitsu, Hitachi, Toshiba, etc.) submitting their products for Common Criteria evaluation. I found none. The Fujitsu MHZ2 CJ Series drives have JIS X 19790 security accreditation (Japan Cryptographic Module Validation Programme), but nothing shows up on the VPL or in-evaluation for NIAP CCEVS or FIPS 140-2 either. I did find my employer's preferred laptop disk encryption product on the NIAP page, at EAL1. I downloaded the ST, CR, and certificagte for posterity.

Meeting with Dr Martin tomorrow at 10:00 a.m. I will talk about it with him then.
