

File 20100726.1400: Notes from Kevin Miller's L-code meeting 1400 today:

The programme is on fire this week, but it is a good fire. The final report from the NSA pen test lab came in, with no surprises. Nothing unexpected. Lockheed has fixed all findings that they chose to fix. There will be a 5.01 patch preliminary build meeting today. One woman on the NSA pen test team has a bias against RM, and will always mark us down no matter what.

The DIOS programme is not moving in tomorrow; their move has been postponed to 10th August for time to bring in a PDS for their classified networks.

Fill out the LM healthworks survey. \$250 for self, \$250 for spouse.
