

File 20100324.1022: Notes from Secure Coding book club this morning:

Analogy between security controls in banking (maker, checker) to security controls in DCID 6/3 and NIST SP 800-53. The security controls in 800-53 are very familiar-looking to bankers. Protection Levels (PL-1 through PL-5) add separation of duties as you go upwards in protection levels. At PL-1, everyone has access to all information and everyone has need-to-know. At higher PL numbers, not everyone has access and not everyone has need to know. See [1, ch. 9 on banking].
