

File 20120110.1417: CybOX (Cyber Observable eXpression) is a schema for organising events or stateful properties observed in operational systems. It handles log events, malware sightings, attack pattern analysis, and other cyber observables. It is under consideration by IETF for the Managed Incident Lightweight Exchange (MILE). Developed by MITRE for DHS. URI: <http://cybox.mitre.org/>. See [1].
