Weekly activity report no. 20120308.1918 (GMT-7) sequence no. 0231, eighth week HT

Looking at HAZAN now in addition to HAZOP as possibly extrapolable methods to find and mitigate 'hazards', in a loose sense of that word, in the project management process of a cross domain system certification activity. I got the ICE book from interlibrary loan for its definitions of commonplace guidewords; I have time to develop this idea only to a bare minimum, but it fits in Chapter 7 and needs to be included. I have also this week been going through a file of direct quotations from books accumulated over several years, tagging which quotations to use in the text. In between times I have been watching old UCDDMO presentations from past conferences to try to find the source of the mandate in 2011 that I need to use to justify the use of SCAP for evidence generation prior to Beta 2. I am thinking now that it has FISMA applications beyond ICD-503 which would anticipate the NISTification of A&A beyond defence that is coming in USG regulation; patterns are becoming discernible. Status: behind schedule but working on it.
