

File 20091112.0728: Notes from meeting with Dr Martin this morning:

- How am I doing: stress, lack of sleep, worrying about progress, shifting requirements, Lockheed taking up too much of my time—situation normal.
- Lockheed work has been taking too much of my time again—CONOPS and [what else?] promised to Jeff Dutoit by COB Friday.
- I forgot to list on the agenda, but I have DO-178B/C training later today—another C&A process to try to understand and integrate. I am not going to try to include it; this class is just for background understanding.
- I told Dr Martin the twin stories about Trusted Path and SCI C&A from a few days ago. It was a revelation to finally have an answer for the Trusted Path question, but the SCI C&A differences question only pointed out just how much more I have to learn and remember. Dr Martin said, though, that he was encouraged that it's starting to come together and he looks forward to seeing a great burst of progress all at once from me soon. He feels sure it will come.
- Dr Martin asked about Alpha Test: have I been gathering good information and taking notes? Answer: yes. Dr Martin suggested I should write a report about CT&E Alpha Test.  
I said I would send the report on Monday. Tomorrow (Friday) is the Alpha Test outbrief; I have to wait for that to occur before I can write the report.
- Without doing a big replanning exercise, for next week put a target date on each to-do item, then track those dates and see where they are heading.
- Schedule a 1715 or 1730 meeting (GMT) some time next week.
- Send all Nexus invitations to `andrew.martin@kellog.ox.ac.uk` because otherwise it doesn't work.
- Dr Martin is teaching a network security course next week. He has to be current on every new attack against SSL and TLS before then.

Meeting ended 0728. Please schedule a new meeting by email next week sometime, any day 1715 GMT or later, because Dr Martin is teaching.
