Weekly activity report no. 20120426.1912 (GMT-7) sequence no. 0238, first week TT

Data analysis of CS-1 and CS-2 event logs continues. I received from Robert Glass a paper reprint of Craddock's 1999 article, needed for a citation tying CS-2 characteristics to similar events in the past. Coding in ATLAS turned up a connection between Backhouse and Dillon (1996) and Kletz's recommendations (1991, 1993, 1999b) that I had never noticed before. I am going back through emails and logs from 2004 looking for all examples of a catalogue of behaviours that occurred during the CS-2 validation phase of the failed evaluation. Some hypotheses for the reasons underlying the different evolution of the CS-1 certification are coming up. Busted ones are kept in chronological order in the notes file and show the progression implicitly, but I want to document it in the tool somehow. Status: working on two data analyses, nothing else. Estimated completion date of data analysis is fourth week of May.

Doctoral Student in the Department of Computer Science

St Cross College, Oxford

End of WAR 0238.

I did not report to my supervisors that I spent time this week judging the Ricks Centre science fair. I did put it on my CV, though, along with the OUSS debate at Nessa's urging, which she reports attracted 650 people to the Sheldonian theatre, which holds 800–1000 people at capacity.

Other events I did not explicitly report, because the delay in completing them might possibly be embarrassing to my supervisors: the lost GSO.15 form was found, signed, and sent to St Cross College, and my supervisors filed their termly reports in GSS.
