File 20100210.1519: Kevin Miller and Craig Christensen called asking about RM 5.0 CT&E for law enforcement. I told them that 5.0 is being certified under NIST SP 800-53 with 800-37 security controls, nearly a complete superset of the requirements for unclassified US government IT systems, with the slight additional complication of PII which we have never had to handle. So, for federal law enforcement, the PAA will be the USG CIO and all requirements will trace back to 800-37 per FISMA, which puts NIST in charge.

I think I sounded reassuringly competent on the telephone.
