File 20091007.0730: Notes from meeting with Dr Martin this morning:

- Skype audio not working. I had to reboot to fix it.

- From reading group: The amount of trust in the world (in the system) is fixed. It can be moved around but not created nor destroyed. Then along comes an Einstein who shows how a small amount of trust can be converted to a large amount of entropy—*cf.* Lehman Bros. notes Dr Martin (see [1, handwritten notes, p. 7].

- Dr Martin was at the same Cyber Leap Year Summit as Spaf was in the blog post Spaf wrote about it [2]. He said his impressions of the meeting agreed pretty well with Spaf's.

- See 20091008.2206 above (copy of weekly activity report № 105) for a description of what Dr Martin and I talked about in our weekly supervisor meeting today.
