File 20120112.1026: Notes from Engineering meeting, 1000 this morning, hosted by Russ Savage:

LM Commit starting now, ethics booklet acknowledgement due, severe weather notification, expense report training next Tuesday by Ernie Jones.

Commitments are public by default, unless set to private. You can see everyone's commitments, even those of high executives.

Software development status: on track with 5.1, FAT will be scheduled soon. RM 6.0 will be an SE Linux build, and it will take a couple of years.

Technical problems; unable to demo LM Commit today.
