File 20111013.1000: Notes from engineering staff meeting today, from Russ Savage. Annual benefits enrolment is on now. Do not forget to do it. Dan and Olav coming to Denver next week to discuss future build plans. The developer are recommending another patch for RM 5.0, to be called 5.1 that will implement the new web GUI, LDAP removal/replacement, and other CRs. Then version 6.0 will be a port to an entirely new OS, either SOlaris 11 or preferably SE Linux. All functionality in 6.0 will be moved to the web page (no more `main_hci`).
